

## Frontend Developer (m/f/d)

**Start: Immediately**

**Location: Bonn**

We are Code Intelligence, a fast-growing IT startup enabling companies to simplify their software testing processes. Our product enables users to test their software for critical security vulnerabilities via fuzzing. For the further development of our software, we are looking for frontend developers.

About our tech stack, we are using Bazel to manage our mono-repository, using mostly Go in the backend and TypeScript for the frontend. We aim to adhere to the Manifesto for Agile Software Development, with two-week sprints, TDD, occasional pair programming, reviews, retrospectives, continuous learning, etc.

### Your Tasks

- You will develop the frontends of our fuzz testing application, be it our Visual Studio Code extension, our cloud dashboard, or a plugin for IntelliJ IDEA,
- You will design compelling user interfaces that make fuzzing easy and joyful.

### Your Profile:

- You are able to work in teams as well as independently — always solution-oriented,
- You have experience in UI development with web technologies (HTML, CSS, TypeScript),
- You also have experience in JavaScript frameworks (Angular, React, or Vue.js),
- General understanding of coding principles in different languages (not only Javascript)
- You've already gained experience in code review and scrum teamwork,
- Experience with Fuzzing would be a plus,
- Also excellent would be experience in UI development in the JVM (Spring or JavaFX).

### What We Offer:

- Good team atmosphere, flat hierarchies, and startup spirit
- The chance to work on a disruptive innovation that addresses critical IT problems
- Flexible working hours and competitive salary
- Respect and support
- International team
- Cool office located on the shore of the Rhine and good transport connections
- Free drinks, snacks, fruits, and Nintendo Switch sessions

We are looking forward to your application!
